SWALE RESTORTION AND LANDSCAPING IMPROVEMENTS WILL BE MADE ON HIBISCUS, ALLENWOOD AND TROPIC DRIVE

In the southern part of Town, residents on three streets - Hibiscus Avenue, Allenwood Drive and Tropic Drive - will see swale restoration and landscaping improvements in their neighborhood.

The Town Commission this week waived the bidding requirement in the Town's Purchasing Policy and directed staff to negotiate the Town's Standard Construction Contract with the **Kailas Corp.**, the firm installing drainage in Bel Air.

Work is expected to begin in early April.

The swale restoration will improve drainage in the area. The landscaping aspect of the

project will help to significantly increase neighborhood beautification. The swale restoration is only the first phase of the drainage improvements.

The Town is awaiting the final permit to install approximately 500 feet of exfiltration trench along the Eastern portion of Allenwood Drive. The final permit the Town is waiting for is to increase the size of the outfall from 18 to 25 inches.

Foxtail, Pindo and Sylvester palm trees will be added to all three streets. This part of the project was funded with a \$30,000 **Neighborhood Improvement Program** grant the **Town Commission** awarded to the neighborhood in 2012.

If residents have questions, please call **Municipal Services Director Don Prince** at **954-275 0908**. You can also e-mail him at **donp@lbts-fl.gov**.
